Hyeonbeen (Edward) Lee

edward.hyeonbeen.lee@gmail.com • Google Scholar • GitHub (@leehyeonbeen)

EDUCATION

Kyung Hee University Mar. 2022 — Feb. 2024
M.Eng. in Mechanical Engineering (Advisor: Jin-Gyun Kim) GPA: 4.10/4.3
Thesis: *'Composite neural network with differential propagation for modeling impulsive nonlinear dynamic systems'*
Coursework: Probability & Statistics, Advanced linear algebra, ROS, Computer vision & Artificial intelligence, Data analysis

Kyung Hee University Mar. 2015 — Feb. 2022
B.Eng. in Mechanical Engineering (Advisor: Jin-Gyun Kim, Shinkyu Jeong) (Upper Div.: 4.04/4.3) GPA: 3.60/4.3
Thesis: *'Data-driven aerodynamic coefficient prediction using deep neural network and PARSEC airfoil parameterization'*
Coursework: Computational dynamics, Robotics, Convex optimization & Deep learning, Numerical analysis, Finite element methods, Algorithm & programming, Thermo & fluid dynamics
(∗ Leave of absence for military service: May 2017 — Feb. 2019)

RESEARCH INTEREST

Robot Learning • Physics-aware ML • Contact-rich Dynamics • Force and Tactile Sensing • Data-driven Modeling

PUBLICATIONS

4. **H. Lee**, M. Jung, J.G. Kim et al., "Forecasting high-frequency contact force dynamics via short-time stationarity and freqeuncy-aware neural filters", *Manuscript in preparation.*
3. B. Koo, M. Jung, **H. Lee**, T. Yeu, J.G. Kim, J.B. Han, Y. Lee, D. Park, "Force estimation and haptic feedback of an underwater hydraulic manipulator using a DHP-DNN-based approach", under review at *IEEE Robotics and Automation Letters.*
2. **H. Lee**, S. Han, H.S. Choi, J.G. Kim (2024), "cNN-DP: Composite neural network with differential propagation for impulsive nonlinear dynamics", *Journal of Computational Physics (WoS IF Top 2.5% in Physics, Mathematical)*, 112578. [link] [code]
1. S. Han*, G.E. Jeong*, **H. Lee**, W.S. Choi, J.G. Kim (2023), "Multi-body dynamics model for spent nuclear fuel transportation system under normal transport test conditions", *Nuclear Engineering and Technology (WoS IF Top 13.7% in Nuclear Science & Technology)*, 55(11), 4125-4133. (*Co-first authors) [link]

RESEARCH EXPERIENCES

Kyung Hee University Postgraduate Researcher
Modeling & Simulation Lab., advised by *Jin-Gyun Kim* Mar. 2024 — Present
- Accelerated and improved the force model for real-time deployment in the control loop for KRISO. Independently secured the project for a year.
- **Ongoing:** Extended the generative frequency-aware force model as a generalizable framework. Finalizing a manuscript for a first-author publication.

KAIST Graduate School of AI Research Engagement
Cognitive Learning for Vision & Robotics Lab., advised by *Joseph J. Lim* Sep. 2023 — Nov. 2023
- Conducted a two-month intensive literature review on skill prior regularized reinforcement learning (SPiRL) and delivered a 90-minute technical presentation to lab members and faculty.
- Received a formal internship offer from the lab director following the presentation (offer later declined).

Kyung Hee University Master's Student
Modeling & Simulation Lab., advised by *Jin-Gyun Kim* Mar. 2022 — Feb. 2024
- Proposed a novel neural network architecture for learning complex dynamics from multi-order derivatives. Resulted in a first-author publication in *Journal of Computational Physics.*
- Developed a neural metamodel of real-world vehicle dynamics with high-fidelity physics simulation for the Korea Atomic Energy Research Institute (KAERI). Resulted in a co-authored publication in *Nuclear Engineering and Technology.*
- Designed a generative frequency-aware model to forecast contact-rich force dynamics of a marine excavation robot in real time for the Korea Research Institute of Ships and Ocean Engineering (KRISO). Independently and successfully secured the project for two years.
- Actively explored and implemented methods from diverse ML domains including time-series forecasting, computer vision, physics-informed learning, and system identification.

Kyung Hee University Undergraduate Researcher
Modeling & Simulation Lab., advised by *Jin-Gyun Kim* Jan. 2021 — Feb. 2022
- Investigated data-driven methods for flexible multi-body dynamics as part of a government-funded research project on vehicle dynamics simulation.

CONFERENCES

J.H. Han, J.B. Han, S.S. Kim, M.H. Kim, Y.H. Kim, **H. Lee**, J.G. Kim, T.K. Yeu. "Digital twin model of underwater construction robot for real-time grinding simulation", *7th International Conference on Multibody System Dynamics.* [link] — Jun. 9 2024, Madison, WI, USA

H. Lee, J. Han, T.K. Yeu, J.G. Kim. "Real-time multi-horizon reaction force forecasting of marine robot using interpretable Transformer", *Korean Society of Mechanical Engineers* (Oral Presentation). [link] — Nov. 1 2023, Incheon, South Korea

H. Lee, S. Han, H.S. Choi, J.G. Kim. "Meta-modeling of nonlinear impulsive dynamics using composite neural network model with differential propagation", *Korean Society of Mechanical Engineers* (**Excellent Paper Award**, Oral Presentation). (∗ Extended works from IMAC 2023 presentation) [link] — May 18 2023, Busan, South Korea

H. Lee, S. Han, H.S. Choi, J.G. Kim. "Composite neural network framework for modeling impulsive nonlinear dynamic responses", *41st International Modal Analysis Conference (IMAC)* (Oral Presentation). [link] — Feb. 16 2023, Austin, TX, USA

H. Lee, J.G. Kim. "Development of multibody dynamics trailer model using normal transportation test data and DNN based surrogate model generation", *Korean Society for Noise and Vibration Engineering* (Oral Presentation). — Dec. 4 2022, Jeju, South Korea

AWARDS & SCHOLARSHIPS

- **Excellent Paper Award** — Korean Society of Mechanical Engineers, 2023
- **Research Assistant Scholarship** — Graduate School, Kyung Hee University, 2022 — 2023
- **Academic Superiority Scholarship** — Kyung Hee University, 2021

SKILLS

- **Programming Languages:** Python · MATLAB · C++ · LaTeX
- **Software & Frameworks:** PyTorch · Git · Docker · ROS · RecurDyn · Gazebo · MuJoCo · OpenAI API
- **Scientific Computing:** Flexible multibody dynamics · Finite element methods · Numerical analysis
- **Natural Languages:** Korean (Native) · English (TOEFL iBT 111) · Japanese (Advanced proficiency)

SELECTED PROJECTS

- Segment-Anybody, at *Kyung Hee University Dept. of AI.* [code]
  - Fine-tuned Meta's Segment-Anything Model (SAM) for detailed human body parts segmentation in human-robot interaction. Doubled its IoU scores on the public PASCAL-VOC 2010 dataset.
- Deep seq2seq from scratch, *Personal project.* [code]
  - Scratch-implemented deep sequence-to-sequence models, from RNN to Transformer variants.
- ROS SLAM on Apple Silicon devices, *Personal project.* [code]
  - Addressed ROS TurtleBot3 SLAM and Gazebo compatibility issues on the Apple Silicon MacOS devices.
- cNN-DP, at *Modeling & Simulation Lab.* [code]
  - Official implementation of the *Journal of Computational Physics* paper.
- RecurDyn ProcessNet with Python, at *Modeling & Simulation Lab.* [code]
  - Automated and parallelized flexible multibody dynamics (FMBD) simulations of RecurDyn.

TEACHING & MENTORSHIP

Research Mentor — Modeling & Simulation Lab., Kyung Hee University, Mar. 2025 — Present
— *Guiding a junior graduate student (Minjae Jung) on neural network design and sequential modeling.*

Teaching Assistant, ME380 Multibody System Dynamics — Dept. of Mechanical Eng., Kyung Hee University, Mar. 2022 — Jun. 2023
— *Lectured on multi-body dynamics with theoretical derivation and its computational implementation.*

COMMUNITY SERVICE

Lead Administrative Assistant — Dept. of Mechanical Engineering, Kyung Hee University, 2022 — 2024
College of Engineering 48th Student Council — Kyung Hee University, Feb 2019 — Jan. 2020
U.S.-R.O.K. Combined Marine Corps Interpreter — 1st Marine Div., ROKMC, Sep 2017 — Feb. 2019
